

CommandPost™

Protecting the World's Most Critical Assets

How can you benefit from CommandPost?

- Maintain situational awareness on the go by providing the most up to date information to first responders, dispatchers or anyone who needs to keep informed as a situation evolves.
- Provide field personnel a full understanding of the situation while on scene by providing a view of all the same Tracks, Alerts, Zones and Situations as full CommandBridge users.
- Visualize, organize and manage first responders by tracking all mobile users/friendly forces and providing an additional channel of communications.
- Enable superior asset management while responding to a situation.

The CommandPost™ iPad app lets mobile users take the power of CommandBridge on scene.

When first responders deploy to an incident, CommandPost allows decision makers and dispatchers to keep the mobile users informed without interruption. The CommandPost iPad app lets users share their position and post messages directly into CommandBridge. Using CommandPost and WiFi or 4G connection, responders can view all the same Tracks, Alerts, Zones and Situation details available to full CommandBridge users. Therefore, CommandPost brings the command center to the fingertips of field personnel and helps them assess the situation while locating friendly force elements nearby.

CommandPost™

CommandPost™

CommandPost features include:

- Share your position with other CommandPost and CommandBridge users even when the app is asleep.
- Change the display name and personalize your track in CommandBridge.
- Quickly center on your own position to get your bearings and locate nearby CommandBridge elements.
- View a map of all global CommandBridge elements while in the field.

ARES SECURITY CORPORATION

ARES Security Corporation protects the world's most critical assets. As the leading enterprise security risk management solutions company, we are able to safeguard the most complex systems operated by the defense, nuclear, government, energy, and utility and transportation industries around the world. Find out more about us at www.aressecuritycorp.com.

The CommandBridge solution allows you to ingest dynamic data from virtually any sensor feed – such as AIS, cameras, radar, sonar, access control and alarm systems – and visualize this information in a context that enhances perception, improves understanding and enables accurate projection. By weaving systems, sensors, and organizations into a collaborative environment, CommandBridge is able to unify security information into a comprehensive view that is sharable.

The CommandPost iPad app takes the power of CommandBridge to the mobile user and allows them to view all the same Tracks, Alerts, Zones and Situations available to full CommandBridge users. The mobile users can share their position and post brief status messages to the CommandBridge Docking Well to allow for coordination and resource positioning.
